## WORK EXPERIENCE

### Cathexis — September 2025 - Present

*C3.ai, Software Engineer*| July 2026 - Present — *McLean, VA*

- Develop full-stack features for an enterprise AI application supporting a U.S. Marine Corps program, building backend data models, services, and APIs on the C3.ai platform with **TypeScript** front-end interfaces.
- Partner with data scientists to develop six machine learning models, implementing data pipelines and interfaces that service model outputs to end users, and own **CI/CD** and release workflows across the Software Development Lifecycle. This includes peer code review, automated testing, and production deployment.

*U.S. Census Bureau, Systems Administrator* | September 2025 - July 2026 — *Remote*

- Supported the U.S. Census Bureau as a Systems Administrator managing on-premise/cloud development platforms using **DevSecOps**. Leveraged **Jira**, **Jenkins**, **Terraform**, **AWS,** and on-premise **Linux** machines to develop efficient **CI/CD** pipelines and maintain modern and scalable on-premise/cloud systems.

### Amazon Web Services (AWS) — May 2024 - August 2024

*Software Engineering Intern* — *Arlington, VA*

- Developed a command line tool that automatically updates user permissions for supported AWS services, reducing manual engineering efforts and saving *100* hours per year.
- Used **TypeScript** to configure AWS services, **Java/Kotlin** for implementing business logic, **AWS Lambda** and **API Gateway** for event-based triggers, **AWS CLI** as the main API endpoint, and **Smithy** to model endpoints.

### UnitedHealth Group — June 2023 – August 2023

*Software Engineering Intern* — *Phoenix, AZ*

- Developed a full-stack application that visualized data from *10,000+* weekly help desk tickets, enabling enterprise-level oversight and reducing managerial workload by *10* hours per week.
- Utilized **Vite** for front-end testing, **React** for component-based architecture, **Django** with **PostgreSQL** for backend management, and deployed via **Kubernetes** using CI/CD pipelines through Git.

## EXTRACURRICULAR ACTIVITIES/PROJECTS

**Quantitative Analyst at Apex Quant** — **September 2023 - December 2024**

*Software Team* — *College Park, MD*

- Collaborated on the software team at the University of Maryland's Apex Quant Club. Built infrastructure to streamline and automate trading strategies developed by the research and trading teams.
- Leveraged **Python** and relevant Python libraries to improve efficiency and boost portfolio performance.

## EDUCATION

**University of Maryland, College Park** — *December 2024*

*Bachelor of Science in Computer Science* — *President's Scholar*

- College Park Scholars citation recipient in business, society, and the economy.
- Relevant coursework: Object-Oriented Programming, Advanced Data Structures & Algorithms, Introduction to Data Science, Computer Vision, Web Application Development, Organization of Programming Languages.

## SKILLS/CERTIFICATIONS

**Active Top Secret (TS) Security Clearance - Granted October 2026**

**Languages:** Java, JavaScript, TypeScript, Python, C, Rust, Ruby, OCaml, Dart, SQL, Kotlin

**Frameworks/Tools:** React, Node.js, Django, PostgreSQL, CI/CD, HTML/CSS, Kubernetes, Terraform, Jenkins

**Platforms/Cloud:** Linux, UNIX, AWS, Git

**Methodologies:** Agile (Scrum, Kanban), DevSecOps, Software Development Lifecycle
